

SETTING UP A VIRTUAL HOME LAB

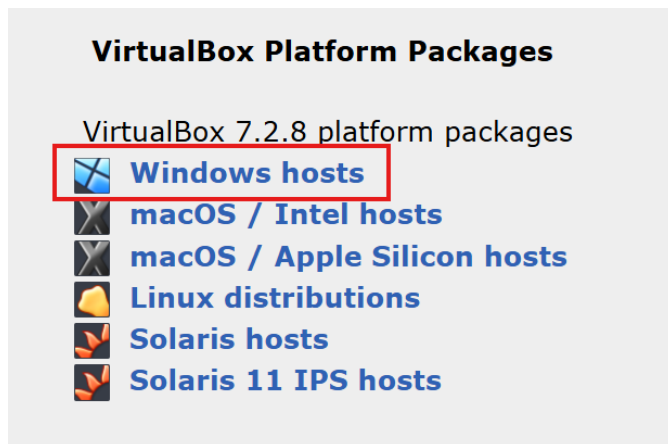

Setting up a virtual home lab was one of the best ways for me to learn cybersecurity and cloud skills without needing a rack of physical hardware.

Here's a clear, step-by-step guide of what I did.

1. Go to the official website: <https://www.virtualbox.org>

2. Click **Download VirtualBox**.

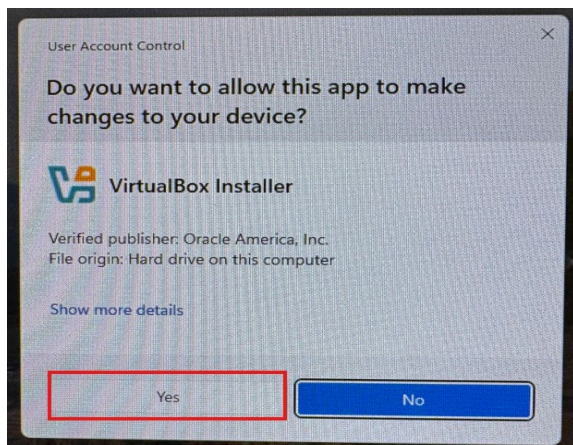

3. Choose your operating system: **Windows hosts**

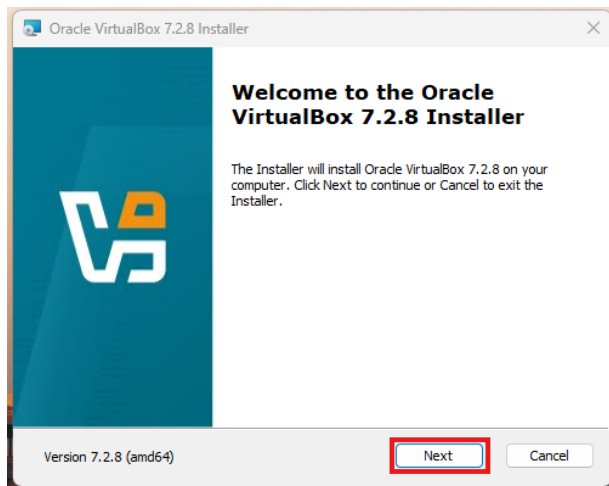

The installer file will start downloading.

Run the Installer

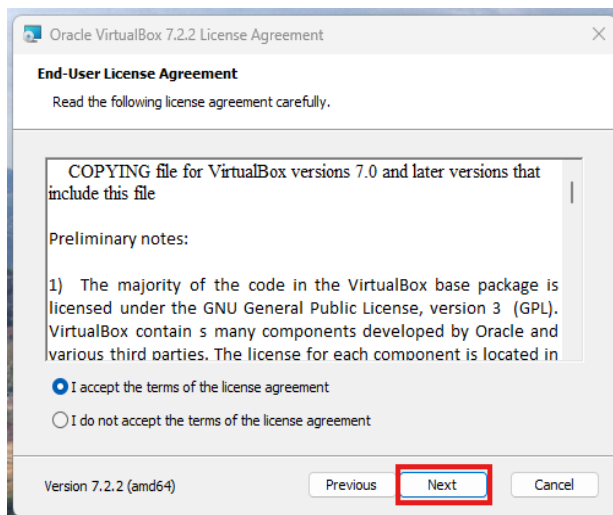

4. Open the downloaded .exe file.

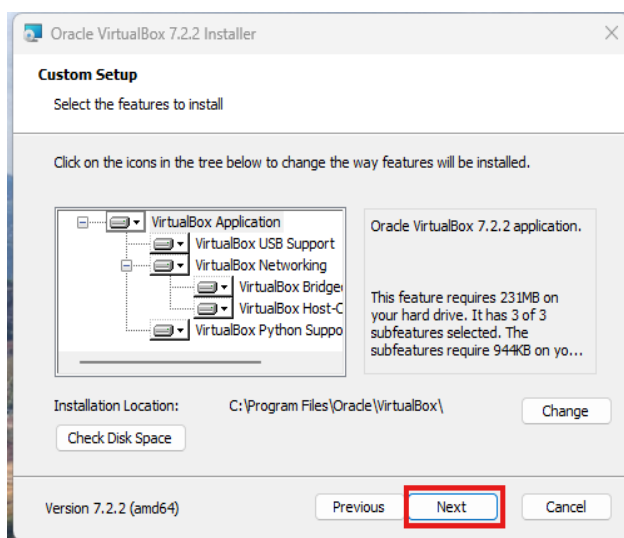

5. Click **Yes** to continue.

6. Click **Next** to continue.

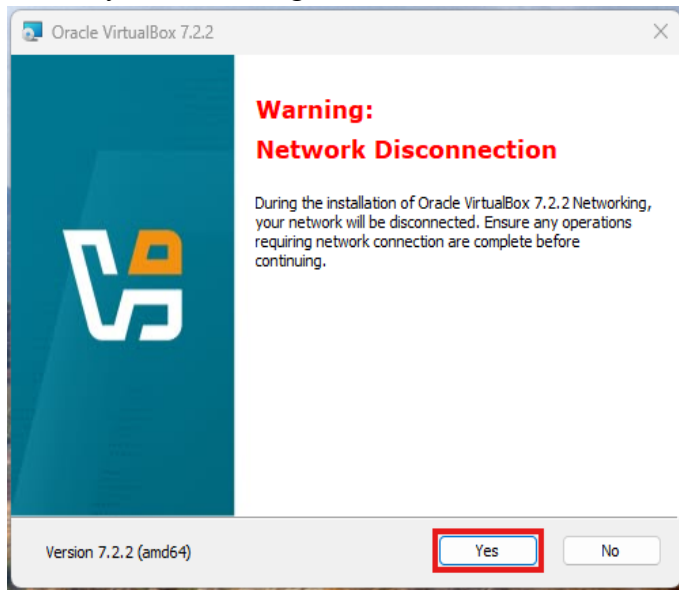

7. Accept the terms of the license agreement and click **Next**

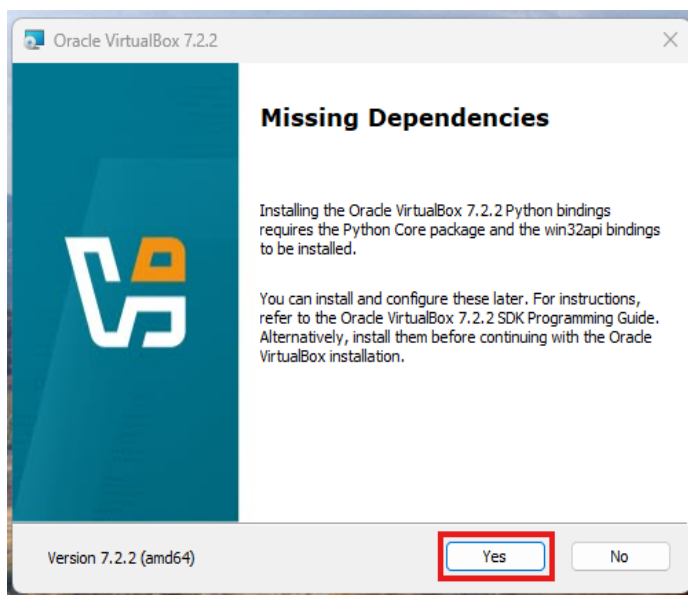

8. Choose installation location (default is fine). Click **Next**

You may see a warning about network interfaces resetting — this is normal

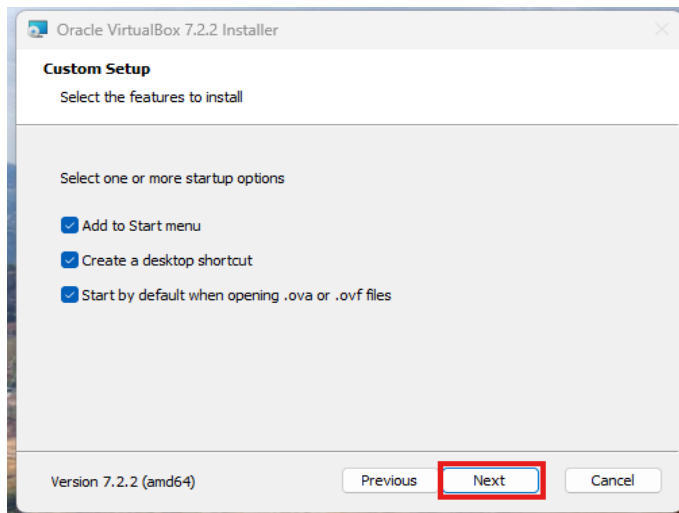

9. Click **Yes**

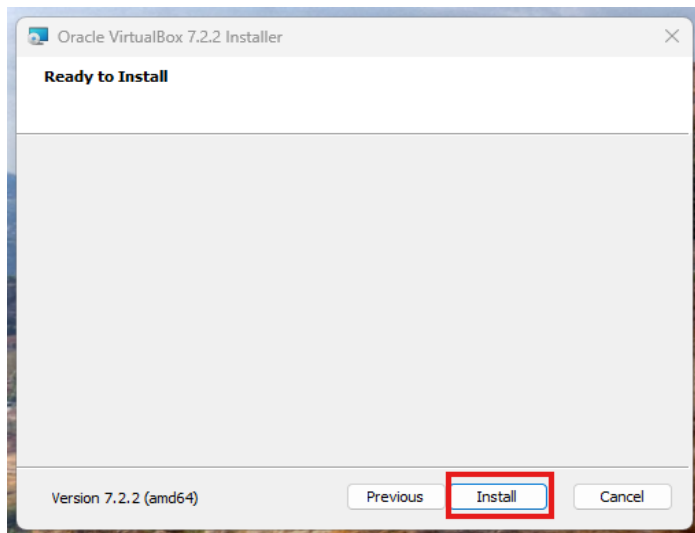

10. Click **Yes**

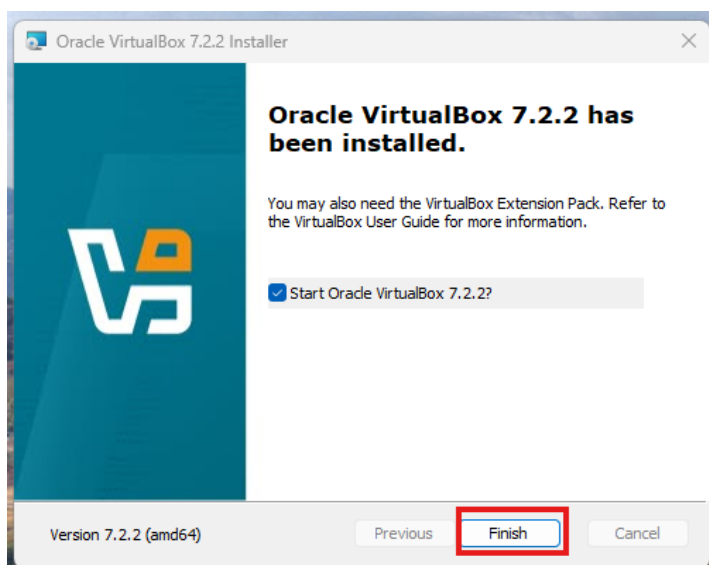

Select features (leave all checked unless you know otherwise)

11. Click **Next**

12. Click **Install**

13. Click **Finish** when done.
